

## Procurement Engineer (Industrial Engineer)

*Main goal is to find and get exactly what the company wants, within optimal costs and benefits*

### Obstacles

- You will have a sit-down with our own R&D team to define the equipment and technology necessary for the research, production and development of lithium-ion batteries
- You will search for potential suppliers and analyze them
- You will communicate with some very strange salespeople, collect offers and avoid multiple attempts of being bribed
- Since this is cutting-edge production, you will have to learn a lot (really, a lot) about technology, production process and battery industry
- Finally, you will procure equipment and organize required training

### You will also get

- Ability to brag that you work in the only lithium-ion battery high-tech production company in the region
- A reasonable level of independence and influence
- A seat alongside founders in one of the fastest-growing and most promising companies on the market
- Asked about your training, development and career advancement
- Opportunity to learn from the amazing management team and work with the most modern technologies
- Sense of pride, especially when someone asks you where do you work, and you just show them ElevenEs introduction video

### Your little helpers in company

- A very professional and motivated team, eager to change the industry
- International management team, experienced in production, battery industry, business development and amateur tennis

### Profile

Background: I'm engineer and I think like one  
 State of mind: Sneaky geek  
 Negotiation skill: Experienced or very keen to learn  
 Preferable experience: Procurement and equipment maintenance  
 Nice-to-have experience in: Battery industry and/or in the field of LIB  
 The best possible skill to have: To find and get exactly what the company wants in a given time for free (or less)
